Table of contents

Twenty (20) plus ways of viewing data in R	2
/iew entire dataset	3
Head and tail of the dataset	3
View the structure of the dataset	3
Dimensions (number of rows & columns) of the dataset	3
Jiew column names	3
View the data type of each column	3
View the first 5 row of a particular column	3
View specific rows or columns	3
Get a summary of your dataset	3
Peek at the top and bottom of each column with skimr pacakge	3
Check data type of columns with sapply function	3
nspect the first few rows of a dataframe withglimpse from dyplyr package	3
View uniques values in a data frame with unique function	3
Jiew frequency of each value with table function	3

Twenty (20) plus ways of viewing data in ${\sf R}$

When data is loading into R,

View entire dataset

Head and tail of the dataset

View the structure of the dataset

Dimensions (number of rows & columns) of the dataset

View column names

View the data type of each column

View the first 5 row of a particular column

View specific rows or columns

Get a summary of your dataset

Peek at the top and bottom of each column with skimr pacakge

Check data type of columns with sapply function

Inspect the first few rows of a dataframe withglimpse from dyplyr package

View uniques values in a data frame with unique function

View frequency of each value with table function
